Summary

Senior Engineer with 7+ years building and scaling production systems, now driving product ownership for an AI chatbot platform. Architected an AWS EKS platform from scratch now serving 3,000+ active users, and led AWS/Azure deployments across 8 regions for 10,000+ employees. Strong background in platform engineering, DevOps, and applied AI (RAG, NLU, agentic systems).

Experience

AutomationEdge Pune, Maharashtra

Senior Engineer *April 2024 – Present*

- Owned end-to-end product roadmap for AIStudio, AutomationEdge's chatbot platform, setting feature priorities and release direction for an AI-driven product used by enterprise clients.
- Built RAG support for AIStudio, contributing to 5 new client onboardings and 2 client migrations since launch. Designed and implemented a licensing system for enterprise usage management.
- Deployed AIStudio on Azure VMs for a production client, used across 8 regions by 10,000 employees. Delivered a secure, scalable, and timely rollout.
- Architected an AWS EKS platform from scratch for CareFlo, using Terraform with modular configuration and remote state — now supporting 3,000+ active users.
- Built CI/CD pipelines (ECR, CodeBuild, ArgoCD) and Grafana observability for CareFlo, replacing a manual, machine-dependent deploy process — then trained the team to deploy independently.
- Tech stack: Python, Django, AWS, Azure, Docker, Kubernetes, Terraform

Engineer *February 2020 – March 2024*

- Built AIStudio from inception — a chatbot framework combining NLU and knowledge-article search that enabled RPA workflows to be triggered directly from conversational channels — establishing the product's technical foundation.
- Developed the backend for AIStudio's NLU data-labeling components from scratch, including database models, business logic, and REST API interface.
- Owned AIStudio's Kubernetes deployment architecture, enabling one-click provisioning of isolated chatbot instances for enterprise cloud deployments.
- Automated the release pipeline using Azure DevOps, replacing manual local builds and manual file uploads with a fully automated process — freeing up developer time previously spent monitoring builds.
- Tech stack: Python, Django, PostgreSQL, Gunicorn, Redis, Docker, Kubernetes, Azure DevOps.

Glocal Healthcare Systems Pvt. Ltd. Kolkata, West Bengal

Research and Development Engineer *May 2019 – February 2020*

- Trained and deployed a one-vs-rest random forest classifier on patient vitals, symptoms, and demographic data via Amazon SageMaker — the company's first production AI model for patient care.
- Maintained and supported the video and text consultation interface for HelloLyf, an online doctor consultation platform — ensuring reliable doctor-patient communication.
- Tech stack: Java, WebRTC, Python, numpy, pandas, scikit-learn, Amazon Sagemaker.

Technical Skills

Languages: Python, SQL
Softwares and Tools: Git, PostgreSQL, Redis, Docker, Kubernetes, Azure DevOps
Web Technologies: Django, Gunicorn, NGINX
Skills: Web Development, Backend Development, DevOps
Cloud Platforms: Microsoft Azure, AWS

Education

Indian Institute of Information Technology, Sri City Chittoor, Andhra Pradesh

B.Tech., Computer Science and Engineering *2015 – 2019*
